PROFESSIONAL SUMMARY

IT Professional with 5 years of enterprise IT experience and strong commitment to building a career in offensive security. Developed practical penetration testing skills through structured training, hands on labs, Capture the Flag challenges and independent security research with a focus on web application security and vulnerability assessment. A proactive learner with strong analytical and problem-solving abilities, committed to continuously expanding cybersecurity expertise and contributing to secure, resilient applications and infrastructure.

CORE COMPETENCIES

Penetration Testing	Web Application Pentesting, Network Penetration Testing, Red Teaming Fundamentals, Exploitation Fundamentals
Vulnerability Management	Vulnerability Assessment, Basic Malware Analysis, OSINT, SIEM Monitoring
Frameworks & Standards	OWASP Top 10, MITRE ATT&CK, Cyber Kill Chain, PTES
Tools	Burp Suite Pro, Nessus, Metasploit, Kali Linux, Parrot OS, Nmap, Wireshark, SQLMap, Gobuster, Nikto, Remnux, FlareVM, Tcpdump, ffuf
Programming & Scripting	Python (tool dev, automation), Bash scripting, SQL
Reporting	Technical Documentation, Vulnerability Reporting, Cross functional Collaboration, Security Best Practices

PROFESSIONAL EXPERIENCE

Analyst | [HCL Technologies](#)

September 2021 – Present

- Performed vulnerability assessment remediation for an enterprise application, resolving DAST and COTS findings in direct coordination with the security team and ensuring closure within SLA.
- Remediate monthly OS level vulnerabilities by coordinating patching activities across Development and Production servers.
- Managed SSL/TLS certificates lifecycle and Configured Single Sign-On (SSO) integration, strengthening authentication and secure communication for the application.
- Administered and maintained application servers across development and production environments including regular health monitoring and reboots to support security system availability.
- Developed custom portlets and Data Integrity rules using SQL to extend application functionality per business requirements.
- Authored user stories, translating business and security remediation requirements into development ready specifications.
- Performed application upgrades and database refresh activities across Development and Production environments, ensuring environment consistency and minimal downtime during upgrade cycles.
- Perform root cause analysis for recurring issues and collaborate with development, databases, infrastructure and security teams to implement permanent resolution.

SELF-DIRECTED CYBERSECURITY TRAINING

TryHackMe Learning Paths

- Pre Security
- Cyber Security 101
- DevSecOps

- Junior Penetration Tester
- Web Fundamentals
- Web Application Pentesting
- Web Application Red Teaming
- Red Teaming

Practical Experience

- Gained hands-on experience in web application penetration testing, vulnerability assessment, authentication and authorization testing, API security, network reconnaissance, Active Directory fundamentals, Linux and Windows privilege escalation, secure development concepts and applying penetration testing methodologies through practical labs and CTF challenges.

KEY PROJECTS

Malware Analysis Lab

- Built an isolated malware analysis environment using FLARE VM and REMnux to perform static and dynamic malware analysis.

Home Pentesting Lab

- Created a personal lab using Kali Linux and intentionally vulnerable applications to practice web application and network pentesting techniques

Business Logic Vulnerability Scanner

- Developed Python-based automation script to assist with business logic testing in web applications, improving testing efficiency and reducing manual effort.

Network Simulation Attack Framework

- Developed a controlled Python simulation framework covering SYN flood and DNS amplification DoS/DDoS vectors for internal red team exercises, enabling safe stress-testing of network defenses.

Endpoint Fuzzing Tool

- Built a custom Python tool leveraging TCP socket connections to fuzz and enumerate hidden API endpoints, surfacing undocumented attack surfaces for inclusion in client security assessments.

CERTIFICATIONS

- CEH v10 – Certified Ethical Hacker Course Completion Certificate, Supraja Technologies
- Certified Cyber Security Professional – Berry9 IT Services Private Ltd.
- Deloitte Australia Cyber Job Simulation (Forage) – Investigated a simulated enterprise cybersecurity breach scenario

EDUCATION

B. Tech in Information Technology

Vidya Jyothi Institute of Technology, Hyderabad
